

IT questions for CityGuard?

General process outlined:

CityGuard Server requirements:

Operating System: Windows 2003 with current service pack, Windows XP Pro

Memory 1GB RAM

Disk Space 5GB available disk space

Network TCP/IP port 80, 8000-8003

Processor 2GHz

Browser requirements (for web clients):

Internet Explorer 7 or 8 or higher or FireFox 3 or higher

Flash 10 or higher installed

Need access to internet (for yahoo maps and one time Flash player download)

Communications requirements:

TCP/IP connection of at least 128 kbit/sec, recommend 1MB/sec for optimal performance

EM memory:

512MB for optimal performance and parallel request; 256MB ok

Is the network connection secure? CG requires user authenticated sessions for network connections. Additionally, CG server can be configured for secure http communications.

Is the Data Secure?- User authentication is required to view CG data. Data is stored in password protected databases.

How difficult to install? It takes about 3 mins to install, with XML configuration file about 20 minutes ( map location)

What kind of connectivity acceptable, not acceptable? As long it has TCP/IP connection, ok.

What kind of Database?- SQL database- 2 databases one on CityGuard Server ( small) one on EM (larger)

How many users / sites? 50/ 20-50
